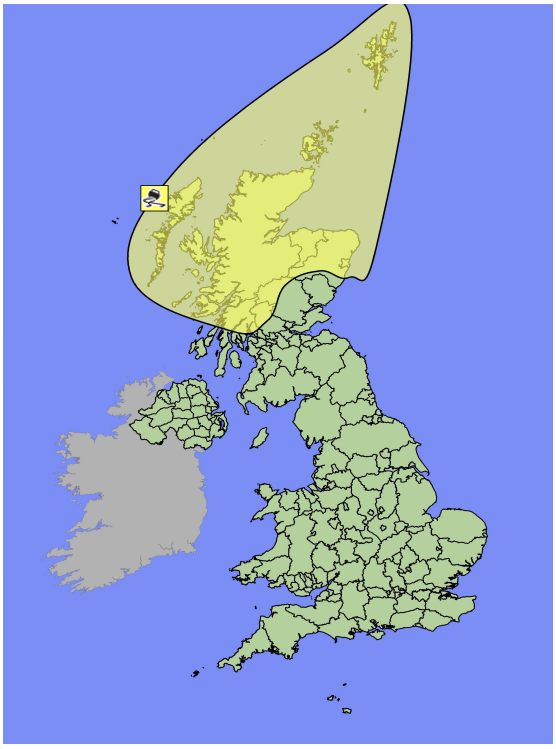
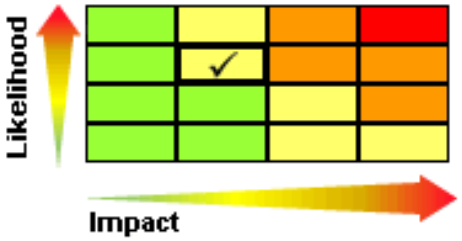
National Severe Weather Warning Service





Chief Forecasters Assessment
Following earlier heavy snow showers, temperatures will widely fall below freezing allowing icy conditions to develop on untreated surfaces. Note that snow showers are likely to persist across the extreme northeast of the Scottish mainland and the Northern Isles well into Sunday morning.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:00 on Sun, 19th Feb 2012** until **11:00 on Sun, 19th Feb 2012**

Although the heaviest of the snow showers over the northern half of Scotland should have died out by Sunday morning, ice will become increasingly extensive on untreated surfaces and then last for much of Sunday morning. Additionally a further 2 to 5 cm of snow may accumulate locally by dawn. The public should be aware that this could lead to some disruption to travel.
